1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

2. In the Specification, the paragraph beginning on page 3, line 7 and running through line 18, has been amended to read as follows:

Conventionally, a sample to be analyzed by photoacoustic spectroscopy is placed in a cuvette or other similar singular sample holder. Although obtaining the advantage of PAS analysis selectivity and sensitivity, the known singular sample analysis is slow and labor intensive. There is some experimental use of PAS to analyze multiple samples, as disclosed in U. S. Application No. 10/001,235, now patent 6,870,626. There is also experimental use of PAS analysis utilizing conventional microtiter plates, as disclosed in U. S. Application No. 10/002,624, now patent 6,873,415, which application is incorporated herein by reference. There is still a need, however, for development of sample array vessels desired specifically for PAS analysis and for analysis parameter methods desired for PAS analysis of such sample array vessels. Further, there is a need for sample array vessels including acoustic detectors operable with PAS systems and methods that allow for PAS sample analysis using the same.
